

## **BAB V**

### **PENUTUP**

Proses pembuatan sistem kemudian dilanjutkan dengan pengetesan atau uji coba sistem, berikut akan dipaparkan kesimpulan, kesulitan-kesulitan yang dialami penulis serta usulan beberapa saran-saran untuk kesempurnaan sistem ini dimasa yang akan datang.

#### **A. Kesimpulan**

1. Berdasarkan hasil uji coba telah dihasilkan dapat mempermudah seseorang mengetahui, mempelajari dan memahami tentang anatomi mata manusia sehingga ensiklopedia dapat berjalan dengan baik.
2. Hasil pengujian sistem yang dilakukan oleh responden menunjukkan bahwa sistem aplikasi ensiklopedia mata manusia berbasis multimedia yang dibuat sudah layak digunakan. Hal ini ditunjukkan dengan hasil terbanyak yaitu, pengujian halaman program 97% menjawab menarik, kemudahan mengakses informasi 77% menjawab mudah, pendapat tentang isi informasi 83% menjawab setuju, kemudahan dalam mendapat informasi tentang mata 70% menjawab setuju, dan desain tampilan pada sistem 93% menjawab menarik.

**B. Saran**

Secara umum program ini dapat menjawab bagaimana membuat sebuah sistem interaktif antara manusia dan komputer. Program ini masih dapat dikembangkan dengan menambahkan kemampuan interaktifnya seperti penambahan program multimedia untuk penampilan gambar bergerak dan penambahan suara yang lebih banyak sebagai tanda interaksi sebuah sistem sehingga sistem menjadi benar-benar hidup dan semakin interaktif.
